MegaDrive is Here! Exciting News from California Lightworks

**Body:**

Greetings from California Lightworks,

We wanted to reach out and let you know about an exciting new LED technology we are now introducing – MegaDrive. Designed for greenhouses, indoor, and multi-level applications, MegaDrive marks a fundamental shift in lighting technology.

The heart of the MegaDrive is the 10-kilowatt central power supply, capable of powering from 10 to 27 400-watt fixtures. This system eliminates the drivers in each fixture and all power drops over the canopy, saving you money on fixtures and installation.

With MegaDrive, you also get:

- Up to 30% reduction in fixture cost and up to 80% reduction in installation costs
- No power drops over the canopy - can be installed by unskilled labor
- High efficiency - up to 3.3 micromoles per joule
- Optimized light spectrum for high yields in flower
- Operates automatically from 208 to 480 volts
- Two-channel variable spectrum control for the best spectrum for all phases of growth
- Automatic sunlight balancing in greenhouses - reduced shadow effect
- Wireless or hard-wired control options for timers, spectrum control, sunrise/sunset, sunlight balancing
- Custom lighting solutions from 10 to 10,000 fixtures
- Made in California - U.S.-based customer support and system design

You can learn more about the MegaDrive [here](#) and check out [our ebook](#).

If you are interested in seeing if MegaDrive would help with your growing needs, feel free to reach out any time. We look forward to hearing from you!
